

1. The regression line is a straight line that best fits the data points. It is used to predict the value of Y based on the value of X.

2. The vertical line is drawn at a specific X value, and the corresponding Y value on the regression line is the predicted value of Y.

3. The regression line is a straight line that best fits the data points. It is used to predict the value of Y based on the value of X.

4. The vertical line is drawn at a specific X value, and the corresponding Y value on the regression line is the predicted value of Y.

5. The regression line is a straight line that best fits the data points. It is used to predict the value of Y based on the value of X.

6. The vertical line is drawn at a specific X value, and the corresponding Y value on the regression line is the predicted value of Y.

7. The regression line is a straight line that best fits the data points. It is used to predict the value of Y based on the value of X.

8. The vertical line is drawn at a specific X value, and the corresponding Y value on the regression line is the predicted value of Y.

9. The regression line is a straight line that best fits the data points. It is used to predict the value of Y based on the value of X.

10. The vertical line is drawn at a specific X value, and the corresponding Y value on the regression line is the predicted value of Y.
